During the years of Soviet power 60 large irrigation canals were excavated and 500 mechanical pumping stations were built. The canals were built in record time- the great 270-kilometer Ferghana Canal, for example, was built in only 45 days. The scope of this project alone can be seen from the fact that: 160,000 persons were engaged in the excavation and construction work; 18 million cubic meters of soil were excavated; 1,300 various auxiliary irrigation works were built; and over 1,000 trucks and 17,000 horses, oxen and camels were used. Twenty-three portable radio stations operated at various excavation points and 42 medical installations functioned constantly. The canal was completed in record time because of the all-out effort made by everybody concerned.
